Beskrivning

Författare: Jan Lagerström.

This book will transport you to a universe founded on a hypothesis whereby electrical instability reigns in an absolute vacuum in which positron-electron pair production takes place spontaneously. The author sheds new light on how matter and antimatter are formed and answers the riddle of gravitation. Gamma radiation from positron-electron annihilation is explained with a new model and he addresses the issues of dark energy, dark matter, and black holes that the physicists have no real explanation for. The propagation of light in space and the orbits of the planets are also treated to new explanations based on this hypothesis. This book will give you a whole new outlook on our amazing Universe.

Annan Information

Jan Lagerström The Universe A sea of positrons and electrons, the building blocks of matter and the riddle of gravitation The Universe Jan Lagerström The.

This book will transport you to a universe founded on a hypothesis whereby . a sea of positrons and electrons, the building blocks of matter and the riddle of . on how matter and antimatter are formed and answers the riddle of gravitation.

It turns out that the gravitation is actuated by an inflow process of matter from the environment space. . be the visible sign on that new matter all the time is created in the universe. .. The electron radius derived from the vacuum mass ... in turn consist of still smaller entities., maybe a common elementary building block.

The Universe : a sea of positrons and electrons, the building blocks of matter and the riddle of gravitation · Jan Lagerström Häftad. BoD, Sverige, 2017.

. användning och underhåll av elsystem i fritidsbåtar · The Universe : a sea of positrons and electrons, the building blocks of matter and the riddle of gravitation.

This book will transport you to a universe founded on a hypothesis whereby . sheds new light on how matter and antimatter are formed and answers the riddle of... . The Universe : a sea of positrons and electrons, the building blocks of matter and . and electrons, the building blocks of matter and the riddle of gravitation

Bokförlaget Opal, 1980-01. ISBN 9789172702219. The Universe : a sea of positrons and electrons, the building blocks of matter and the riddle of gravitation

Arabiska (klassisk) · The Universe : a sea of positrons and electrons, the building blocks of matter and the riddle of gravitation · Jag läser A DAISY-format.

The Universe : a sea of positrons and electrons, the building blocks of matter and the riddle of gravitation. av Jan Lagerström, utgiven av: BoD. Tillbaka.
